## PROFILE

I am an experienced full stack BI developer with a proven track record of delivering innovative solutions ranging from business process design to application modelling and systems integration. I have 15 years of experience within the SAP BI suite including domains of data modeling, technical implementation, corporate reporting, data governance, authorization, and cross skills in ABAP. Before entering into the SAP area, I was working as a data warehouse developer with the SAS applications and as Cognos developer on a DB2 database. A background giving me deep insights into basic data warehouse developing. I have a passion for the latest technologies and trends in the SAP BI ecosystem and have in recent years also gained solid experience within BW on HANA and HANA native. My professional vision is to leverage core SAP BI technology to drive performance management and reporting to the next level and thereby enabling clients with data and performance for informed decision making – both operational and strategic.

## TECHNOLOGY SUMMARY
